MEDITECH

Wireless Phlebotomy

ACS MediHealth Wireless Phlebotomy Offering

An ACS MediHealth powered mobile computer gives you ultra-flexibility and reduces costs. ACS gives you the technology to run MEDITECH wireless Phlebotomy application and MEDITECH clinical applications on the same device. Whether you are collecting specimen samples or entering vitals, we provide a solution that meets your clinical and laboratory needs. One platform for your complete enterprise.

“ACS MediHealth delivers the solution!”

ACS MediHealth collaborated with MEDITECH to provide a wireless Phlebotomy device to be used in both QVGA & VGA modes when accessing MEDITECH by Citrix or Terminal Services.

St. Joseph’s thoughts on MEDITECH’s Phlebotomy Application: Wireless Phlebotomy not only assists St. Joseph’s caregivers with their own workloads, it also fosters teamwork among all staff. “If one of our phlebotomists has completed his or her designated workload, they can then use their handheld to help out with the workloads of other staff members,” says VanAlstine. “If a phlebotomist works off another’s worklist, the system is automatically updated to show each draw as it’s completed. With this function, we have seen a noticeable decrease in wait times for completed orders, as well as an increase in staff efficiency.”

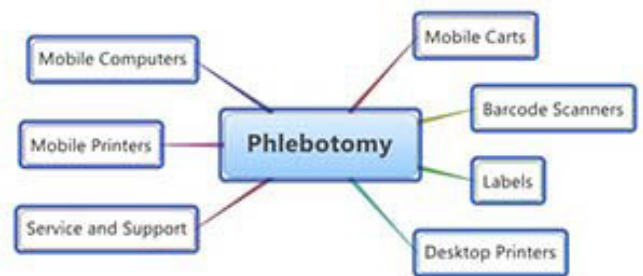

Additionally, since hospital staff can enter collection times at the patient bedside rather than on a desktop when returning to the lab, the collection time data for the specimen is reflected more accurately in the system—another definite plus for patient safety.

As a mobility solution collaborator with MEDITECH, ACS MediHealth provides a technology foundation for MEDITECH’s acute, long-term care, ambulatory and home care customers, supplying both telehealth devices, tablets and other devices, as well as tailored, effective products and services for all other MEDITECH environments.

ACS MediHealth offers professional services for users of the MEDITECH system. These services are designed to assist MEDITECH clients, not just with adopting new technologies, but also with revising workflows and embracing change management for long-term success.

Some of ACS MediHealth services include, but are not limited to:

- Scripting Services: Turning your manual process into automation
- Certified and MEDITECH ready devices for purchase
- Device Fairs
- Integrating devices into clinical environment
- Mobile Device Management
- Technology Gap Assessment
- Wired/Wireless Network Assessments & Design
- Workflow Redesign and Assessment
- etc.

ACS MediHealth, not a new company - but a new experience!
